DATA REQUEST SET A b r a m s - S C E - 0 0 1

To: Abrams
Prepared by: Ryan Stevenson
Job Title: Senior Advisor
Received Date: 3/5/2019

Response Date: 3/7/2019

Question 02: Please, provide risk assessments and risk mitigation plans created, produced or reporting in the years 2015 to 2019 that weigh the relative risks of particular zones, geographies, towns, cities, counties and other standard mappable areas as defined by utility company and it's insurers. Provide rank and provide relative risk ratio for each of these geographic categories.

Response to Question 02:

SCE objects to the question as it is vague and ambiguous, overly broad, unduly burdensome, and because it is beyond the scope of this proceeding. SCE's 2019 Wildfire Mitigation Plan (WMP) is comprised of mitigation and activities SCE plans to undertake in 2019 to reduce wildfire risk. Notwithstanding these objections, SCE responds as follows.

SCE's historical wildfire risk assessments and associated work papers are part of its Grid Safety and Resiliency Program (GSRP) Application (A.) 18-09-002 and included in SCE's response to Question No. 1 (along with amendments). SCE's wildfire risk assessment is also included in its Risk Assessment and Mitigation Phase (RAMP) Report submitted in the RAMP Order Instituting Investigation proceeding, I.18-11-006, also included in SCE's response to Question No. 1. Please also see Section 3 in SCE's 2019 WMP that includes a description of its wildfire risk analysis and risk drivers, including a description of the high fire risk area (HFRA) locations in SCE's service area. Additionally, the CPUC-adopted fire safety regulations includes a requirement for the IOUs to integrate into their operations the new high fire threat district (HFTD) maps, which indicates areas in California that are affected by Tree Mortality High Hazard Zones (HHZ, or Zone 1) or represent an elevated (Tier 2) or extreme (Tier 3) wildfire risk due to potential utility infrastructure associated ignitions.
