DATA REQUEST SET A b r a m s - S C E - 0 0 1

To: Abrams
Prepared by: Russell Archer
Job Title: Senior Attorney
Received Date: 3/5/2019

Response Date: 3/7/2019

Question 03: Please, provide a list of the top 100 most at-risk components or parts related to electric generation and provide ranking and relative risk ratio for each of the following categories (based on most recent data available):

- a. likely/relative contribution to wildfire ignitions
- b. likelihood of being a wildfire ignition source
- c. likely/relative contribution to the propagation/spread of wildfires

Response to Question 03:

SCE objects to the question on the grounds of relevance and burden. SCE's 2019 WMP is composed of risk-mitigation activities and programs related its transmission and distribution systems, not its utility-owned electric generation facilities.
