

Southern California Edison's Tehachapi Renewable Transmission Project – Segments 8 & 9

Project Update – Southern California Edison (SCE) contractors have begun construction-related activities along portions of Segments 4-11 of the Tehachapi Renewable Transmission Project (TRTP). Upon completion, the project will provide renewable generated electricity and help meet California's renewable energy goals.

Construction Activities: Segment 8 Transmission Line

- Removal of existing foundations, structures and wires
- Grading for new improved access roads and site preparation for new structures
- Installation of foundations, tower/pole structures and wires
- Wire setup sites, (i.e., pull sites, wire splice sites, tensioning sites)
- Use of construction equipment and vehicles

Locations:

Work will take place within SCE's right-of-way in unincorporated areas of Los Angeles County and the City of Chino.

Every effort will be made to reduce the amount of noise generated by activities related to construction. SCE understands that construction may be inconvenient to local residents. We greatly appreciate your patience as we move to complete construction as quickly and safely as possible.
