

# Technical Assistance and Technology Incentives

A reimbursement program for purchase and installation of demand response equipment

Receive up to \$125 per kW of verified load reduction

- Financial incentives
- Free preliminary assessment
- Free engineering audits

Southern California Edison's (SCE) Technical Assistance and Technology Incentives program provides eligible business customers with:

- Technical assistance in the form of demand response site assessments at no charge, and;
- Financial incentives for the installation of eligible technologies that reduce electricity usage during periods of peak demand.

These services are also intended to give you increased flexibility to participate in other demand response programs that provide additional energy-saving incentives.

## Eligibility

All customers in SCE's service territory with registered demands of 200 kW or more are eligible to take advantage of this program.

Customers with service accounts under 200kW may also be eligible, if all of the following conditions are met:

- All service accounts participating in the TA&TI program have an interval meter.
- The customer's aggregated load is equal to or greater than 200kW for all service accounts participating in this program.
- All participating service accounts under 200kW must be enrolled in a qualifying DR program at the time they enroll in the TA&TI program.

TA&TI participating customers include large office complexes, retail stores, large manufacturing firms, warehouses, process industrial facilities, water agencies, and agricultural and institutional facilities.

### The Technical Assistance Process

#### The Preliminary Assessment

The technical assistance process begins when you contact your SCE Account Representative to discuss your business' demand response potential and schedule a preliminary assessment. Your Account Representative will work with you to complete registration forms enabling SCE to schedule a preliminary assessment, to be performed by an SCE-contracted engineer. The engineer conducting the preliminary assessment will determine whether a more in-depth technical audit of projected load reduction potential in your facility is recommended.

There are no charges associated with a preliminary assessment conducted by an SCE-contracted engineer. With SCE's prior approval, you may use an engineer of your choice to conduct a preliminary assessment.

#### The Technical Audit

If a technical audit is recommended, it will identify applicable demand response practices and methods, and recommend measures and technologies to achieve demand response potential. The technical audit will be conducted by an SCE-contracted engineer. You have the option of using an engineer of your choice to conduct a technical audit, if the engineer's qualifications are acceptable to SCE and the technical audit is comparable to an SCE-contracted engineer. For additional terms and conditions, please contact the TA&TI Helpline at **(866) 238-3605**.

#### The Technology Incentive Process

Technology incentives are available to eligible customers for the installation of qualifying demand response technologies. Qualifying technologies include, but are not necessarily limited to, energy management systems, dual-level lighting, remote-controlled switches, building automation systems, demand control software, and/or other enhanced automation technologies.

#### To Reserve Technology Incentives

Once you elect to proceed with installation of qualified equipment, you must reserve technology incentives by submitting the Energy Management Solutions Incentives Application (available at [www.sce.com/business/ems/appdownload](http://www.sce.com/business/ems/appdownload)) for your selected demand response

technologies. Once your application is processed and eligibility is confirmed, SCE will let you know if funding is available, and that your reservation will be held for 180 calendar days.

#### To Apply for Technology Incentives

After your Energy Management Solutions Incentive Application is confirmed as eligible, and you've purchased and installed one or more qualifying demand response technology in your facility, you must apply to receive your technology incentives by completing and submitting an Application for Technology Incentive (available at [www.sce.com/tati](http://www.sce.com/tati)). Upon processing of your application and confirmation of eligibility, and availability of funding and measurement and verification of your facility's load reduction potential from the qualifying technology, you will be reimbursed up to \$125 per kW of measured and verified load reduction. This amount is not to exceed the actual reasonable cost of the purchase and installation of the qualifying technology. Technology incentives are available on a first-come, first-served basis until funding is depleted or the program is terminated, whichever comes first.

## TA&TI and Demand Response Program Participation

To be eligible to receive 100% of the technology incentive (\$125 per kW of measured and verified load) for your installed qualifying technology, you must enroll your facility in and participate in one or more qualifying demand response programs for an additional 12 consecutive months. Under no circumstances will a customer be paid more than the reasonable cost of the equipment and installation. Qualifying demand response programs include the Demand Bidding Program (DBP), the Base Interruptible Program (BIP), the Capacity Bidding Program (CBP), the Agricultural Pumping-Interruptible program (AP-I), the Critical Peak Pricing program (CPP), the Scheduled Load Reduction Program (SLRP) and third-party demand response programs such as Demand Response Resource Contracts.

**Note:** Customers who participate in multiple demand response programs cannot receive multiple program payments for the same reduced load.

## Automated Demand Response (Auto-DR) Option

The Auto-DR option is open to customers who are willing to reduce electricity usage after receiving Internet event or price signals from SCE.

Customers considering TA&TI may want to evaluate the Auto-DR option, which offers these additional benefits:

- Auto-DR enables eligible SCE customers to participate in SCE Demand Response programs by reducing electricity usage during period of peak demand *without manual intervention*.
- Auto-DR customers may purchase and install qualifying demand response-enabling equipment, such as energy management systems or other automated control systems, and get reimbursed up to \$300 per kW of measured and verified load.

To be eligible for the Auto-DR option, a customer must enroll in the SCE Capacity Bidding Program (CBP), Critical Peak Pricing program (CPP), Demand Bidding Program (DBP), Demand Response Contracts (DRC) or Real-Time Pricing rate schedules (PA-RTP or RTP-2) and meet the program requirements.

## For More Information

To learn more about TA&TI or Auto-DR, please send an e-mail to [ta&ti@sce.com](mailto:ta&ti@sce.com), or call the TA&TI Helpline at **(866) 238-3605**. To learn more about other SCE demand response or energy efficiency programs, please contact your SCE Account Representative. You can also give us a call at **(800) 990-7788**, or visit us online at [www.sce.com](http://www.sce.com), [www.sce.com/drp](http://www.sce.com/drp), or at [www.sce.com/rebatesandsavings](http://www.sce.com/rebatesandsavings).

This fact sheet is meant to be an aid to understanding SCE's pricing schedules. It does not replace the CPUC-approved tariffs. Please refer to the individual rate schedule of interest for a complete listing of terms and conditions of service, which can be viewed online at [www.sce.com](http://www.sce.com).
