The residential construction industry is changing rapidly in response to the call for healthier homes, conservation of resources, and greater energy-efficiency.

Builders, HERS Raters, Architects, Engineers, and others are encouraged to attend this full day workshop to learn about green building resources, trends, technologies, and how energy-efficiency is the foundation for building a green home. This seminar provides a detailed discussion on the LEED for Homes Program and an overview of Build It Green's GreenPoint Rated Program emphasizing issues related to indoor air quality. In addition, learn about SCE's California New Homes incentive program for energy-efficiency and other opportunities for assistance that can help offset the cost of shifting towards greener construction practices.
