

MISSION CANYON STREAM RESTORATION PROJECT

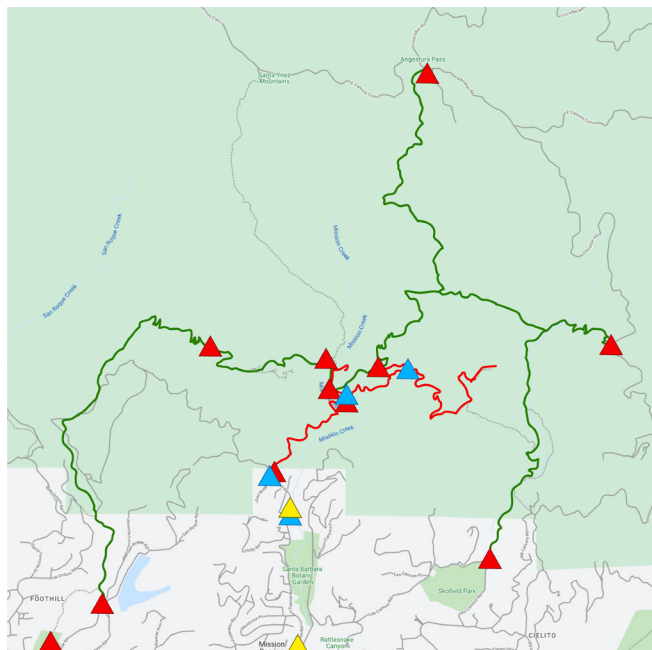

Southern California Edison's priority is the safety of its customers, team members and the communities it serves. Our commitment to safety and the environment is at the core of the Mission Canyon Stream Restoration Project.

The Stream Restoration Project is aimed at repairing damage and restoring the environment in Mission Canyon, where road grading and vegetation management by SCE crews generated unintended environmental impacts in Mission Creek in 2019. We are committed to completing all remediation work and restoring impacted areas of Mission Canyon in close coordination with city, county and environmental regulatory agencies.

UPON ITS COMPLETION, THE STREAM RESTORATION PROJECT WILL RESULT IN:

- Removal of rocks and debris
- Restoration of stream hydrology, habitats and ecosystems
- Stabilization of creek banks and slopes
- Remediation of impacted trees and woodland areas
- Rehabilitation of sensitive species populations

TUNNEL TRAIL CLOSURE

Construction for the Stream Restoration Project is projected to begin in May 2024 after the Memorial Day holiday and will occur in one or more phases for up to six months. Construction will require a temporary closure of lower Tunnel Trail from the Inspiration Point trailhead at the top of Tunnel Road. A temporary full closure is necessary to preserve public and employee safety during the construction period. No other front country trails will be closed due to the Stream Restoration Project.
