***WSD-001 – Resolution WSD-001 to Establish Procedures for the Wildfire Safety Division's  
Review of 2020 Wildfire Mitigation Plans Pursuant to PUC Sections 8386 and 8386.3***

**DATA REQUEST SET T U R N - S C E - 0 0 3**

**To: TURN**  
**Prepared by: Raymond Fugere**  
**Job Title: Principal Manager**  
**Received Date: 3/5/2020**

**Response Date: 3/10/2020**

---

**Question 009:**

Page 2-7 of SCE's WMP states, "asset condition is generally limited to inspection and remediation activities related to the asset types noted...but are tracked in multiple systems depending on operational areas of responsibility."

- a. Is it possible to track all information on an asset in one system?
- b. If no, please explain why multiple systems are required.
- c. Please describe any efforts to combine asset tracking systems in one comprehensive tracking system.

**Response to Question 009:**

- a. No currently it is not possible to track all information on assets in one system. Most of SCE's asset condition data, such as inspection and remediation activities, are held within SCE's system of record (SAP). However, certain activities such as pole loading are housed in a program specifically designed to store this information and access and use it. Given the operational complexities of the various databases utilizes, SCE would need to perform a detailed analysis of the capabilities of all the systems out in the marketplace to determine if one system can be used for all the requirements, from an operations standpoint.
- b. See above
- c. As stated in part "a," given the complexity of the various systems SCE uses, SCE plans to explore integration of tracking systems and the data that they contain over this WMP period.
