

Inspection Remediations: General Process Flow Chart

Distribution, Transmission & Substation

Note: Timeframes shown above vary depending on the complexity of the project, the size of a project, and the nature of the work (e.g., installation of avian protection versus a pole replacement that contains equipment). Tier 3 and Tier 2 timelines are also taken into consideration to help prioritize work and ensure SCE has sufficient time to conduct each phase of the remediation process and complete the repair work by the desired compliance timeframe.
