Public Safety Power Shutoffs

Your safety is our highest priority. Severe weather events continue to increase wildfire risk across Southern California.

When fire weather conditions put communities at risk, we may need to temporarily shut off power to protect your safety through a Public Safety Power Shutoff (PSPS). This important safety tool helps reduce the risk of fires caused by utility equipment.

We understand the hardship that power outages can create, and remain committed to helping you stay safe, prepared and informed.

How to Prepare: Update your contact information or sign up for PSPS alerts in English and other languages at www.sce.com/pspsalerts.

Learn more about PSPS, including answers to common questions and emergency preparedness at www.sce.com/psps.

Identify , Prevent and Report Utility Scams

- **Slow down:** Take time to consider the legitimacy of urgent payment requests from senders you do not know.
- **Verify:** Contact SCE directly using the verified number on your bill or visit sce.com to check your account status.
- **Report it:** If you receive a fraudulent call, text, email or in-person visit, report the incident immediately.

Visit www.sce.com/scamalert for tips, resources and incident reporting.

Be Prepared for Outage Emergencies

Homes and small businesses in PSPS-affected areas should consider adding a portable backup battery or portable generator into their emergency preparedness strategies. These devices can supply backup power for essential personal electronics, such as mobile phones and computers, as well as critical household appliances including refrigerators, lighting, garage door openers and medical equipment, helping you stay prepared during outages. Rebates are available for qualifying products.

Watch our backup power educational videos, learn more about available solutions and apply for rebates in the SCE Marketplace at www.sce.com/backuppower.

Safe Portable Generator Hook-Up

Connecting a portable generator to your home's electrical wiring is dangerous and can cause serious injuries or electrocution.

Do not hook up a generator directly to an electrical panel. The safe way is to plug the electrical equipment into a portable generator using a properly sized extension cord approved by Underwriters Laboratories (UL).

If your needs require a generator to be wired directly to your home's electrical system, California state law mandates that you notify us. We also recommend that you enlist the service of a qualified electrician to perform the task. To learn more, visit:

Proposition 65 Warnings

WARNING: The Safe Drinking Water and Toxic Enforcement Act of 1986, commonly referred to as Proposition 65, requires the governor to publish a list of chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. It also requires California businesses to warn the public of potential exposures to these chemicals that result from their operations.

Providing safe and reliable service to all of our customers is a top priority for Southern California Edison and we want you to be aware of these chemicals so that you can reduce exposure to chemicals associated with electricity generation and distribution. We handle all equipment and materials at our sites carefully for your good health as well as ours. However, if you are at or near our facilities and work sites, you can be exposed to the following chemicals on the state's Proposition 65 list. Reduce, limit, or avoid activities at and near the sources of exposure described below. For more information go to:

www.P65Warnings.ca.gov

1. Diesel Generation : Diesel Exhaust: SCE uses diesel-fueled emergency generators during emergencies and other times to help minimize the interruption of our customers' supply of electricity. The generators are used at some SCE facilities like substations and service centers, and at locations where repairs are made to the electrical system. SCE also uses diesel as the primary fuel for electricity generation on Catalina Island and in many service vehicles used throughout our service territory. Diesel engines produce exhaust as a by-product of the combustion of diesel fuel. Breathing diesel engine exhaust exposes you to chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. You should avoid breathing diesel fumes whenever possible.

2. Wooden Utility Poles : SCE uses wooden poles that have been treated with chemical preservatives. These chemicals include pentachlorophenol, which is known to the State of California to cause cancer, and petroleum products such as diesel fuel, which contains chemicals including toluene and benzene that are known to the State of California to cause cancer and birth defects or other reproductive harm. If you come into contact with a wooden utility pole or the dust, debris, soil surrounding the pole, or water runoff that may contain dust, debris, and soil previously in contact with the pole, you could be exposed to these chemicals. Avoid contact with wooden utility poles and the dust, debris, soil surrounding the poles, or water runoff that may contain dust, debris, and soil previously in contact with the poles.

3. Painted Structures : SCE utilizes metal and wood structures and equipment that may have been coated with paints containing chemicals, such as lead-based paint, that are known to the State of California to cause cancer and birth defects or other reproductive harm. When the paint on these structures deteriorates, flakes of paint can impact the soil adjacent to the structure. To avoid exposure, you should avoid contact with any paint flakes or soil near any structure with deteriorating paint.

Be Ready When A CPP Event is Called

If you are a customer with the Critical Peak Pricing (CPP) rate plan, by reducing your electricity use during CPP events you can minimize incurring higher prices. Plus, your business will earn credits on your electricity bills during the summer season when your bills are typically the highest.

On-Bill Financing (OBF) program

Finance Energy-Efficient Business Upgrades with 0% Interest

Looking to improve your facility's efficiency while managing upfront costs? Southern California Edison's **On-Bill Financing (OBF)** program makes it possible to upgrade your business with **energy-efficient or clean-energy equipment** using **0% interest, no-fee financing** with repayment made directly on your **monthly SCE bill**. Investing in energy improvements today can deliver long-term benefits for your business. Let us help you power a more efficient tomorrow.

To learn more, visit sce.com/onbill
