**Holiday Safety Reminders**

As you begin preparing for the holiday season, we remind you to follow these important safety tips:

- Do not use decorative lighting with frayed cords and wires, broken fuses or broken light bulbs.
- Do not use staples, nails or tacks to hang electrical cords. These can pierce the protective insulation.
- Use only Underwriters Laboratories (UL) approved lighting and extension cords.
- Plug no more than three strands of lights into each electrical cord/outlet.
- Ensure live trees are well watered, and keep electric cords away from tree stands with water pans.
- Never use lighted candles on or near holiday trees or decorations.
- Remember to unplug decorative lights when you leave home and before going to bed.

We wish you and yours a safe and happy holiday season. For more safety tips, please visit [www.sce.com/holidaysafety](http://www.sce.com/holidaysafety).

**Large SCE Solar Project in Porterville Adds 125 Central and Southern California Construction Jobs**

SCE’s solar photovoltaic project in Porterville is part of the company’s commitment to investing in clean generation and smart grid technologies to meet our customers’ future energy needs. Construction of the state’s largest investor-owned utility photovoltaic power plant is nearing completion and has created approximately 125 jobs for workers in Central and Southern California.

The 29,400 panel solar array will be located on 32 acres of city land adjacent to the Porterville airport and will be capable of generating 6.7 megawatts of electricity, enough power to serve 4,300 average homes on peak.

The solar plant to be installed at the Porterville site will be connected directly to SCE’s nearest neighborhood distribution circuit and will benefit all SCE customers in the region.

**SCE Solar Project Benefits Include:**

- Providing power at roughly half the cost of smaller photovoltaic installations in California and twice the speed of large central station solar facilities.
- Creating new generation where customer demand is expected to rise.
- Gaining insights into the electrical effects of the high penetration of photovoltaics on distribution circuits. Information gained will be shared with the power industry.

The Porterville installation will join SCE solar plants already online in Fontana and Chino and six others under construction in Southern California’s Inland Empire. During the next five years, SCE plans to install a total of 250 megawatts of solar generation at up to 100 sites. The utility also plans to sign power purchase agreements with independent producers for an equal amount of solar generation. The entire solar program is expected to create approximately 1,200 jobs.

**NOTICE OF SOUTHERN CALIFORNIA EDISON (SCE) COMPANY PROPOSED GENERAL RATE CASE APPLICATION FILING**

**IMPORTANT INFORMATION ABOUT SCE’S PROPOSED RATE INCREASE**

Application (A.) 10-11-015

On November 23, 2010, Southern California Edison Company (SCE) filed a proposed General Rate Case (GRC) Application with the California Public Utilities Commission (CPUC) requesting authority to collect base rate (non-fuel) revenues of $6.285 billion. The proposed application seeks authority to have the rates become effective January 1, 2012. Every three years, SCE is required to file a GRC in which the CPUC sets annual revenue levels. Annual revenue is the total amount of money a utility collects through rates in a given year for specific purposes. Base rate revenues pay for the costs of owning and operating electric distribution and generation facilities (excluding fuel and purchased power).

**THE KEY REASONS FOR SCE’S PROPOSED INCREASE**

SCE has made this request to continue providing safe and reliable service to its customers. The primary reasons for the requested revenue increase are:

1. To connect new customers to the system and respond to customer requests, such as undergrounding projects.
2. To reinforce and upgrade the electric system to accommodate load growth.
3. To continue SCE’s multi-year capital investment program to replace aging distribution infrastructure and business systems.
4. To meet increased costs for Information Technology (IT) systems such as protection from cyber security threats to electric system assets.
5. To make a substantial contribution to the employee and retiree pension fund to address the losses in financial markets over the past few years.

(Continued on next page)
WHAT THIS PROPOSED GRC APPLICATION MEANS TO YOU

If the CPUC approves the application, SCE’s request would result in a $866 million, or 7.55 percent, increase over currently authorized total revenues (or a 16.19 percent increase in base rate revenues). SCE’s application also proposes estimated base rate revenue increases of $246 million in 2013 and $527 million in 2014. The actual increases in 2013 and 2014 will be determined by the CPUC prior to the beginning of each year. SCE is making this request now because the CPUC requires utilities to file a GRC Application approximately one year before the effective date of the proposed rate change.

If SCE allocates this proposed increase in 2012 revenues based upon the most recent approved methodology, the impact on each customer group would be as shown in Table 1, below:

Attention: Russell G. Worden
General Rate Case Project Manager

THE CPUC PROCESS

The CPUC’s Division of Ratepayer Advocates (DRA) will review this application. The DRA is an independent arm of the CPUC, created by the Legislature to represent the interests of all utility customers throughout the state and obtain the lowest possible rate for service consistent with reliable and safe service levels. The DRA has a multi-disciplinary staff with expertise in economics, finance, accounting and engineering. The DRA’s views do not necessarily reflect those of the CPUC. Other parties of record will also participate.

The CPUC may hold evidentiary hearings whereby parties of record present their proposals in testimony and are subject to cross-examination before a CPUC Administrative Law Judge (ALJ). These hearings are open to the public, but only those who are parties of record may present evidence or cross-examine witnesses during evidentiary hearings. Members of the public may attend, but not participate in these hearings.

After considering all proposals and evidence presented during the hearing process, the ALJ will issue a draft decision. When the CPUC acts on this application, it may adopt all or part of SCE’s request, amend or modify it, or deny the application. The CPUC’s final decision may be different from SCE’s proposed application.

PUBLIC COMMENTS AND OPINIONS ARE IMPORTANT TO THE CPUC

As part of its decision-making process, the CPUC is interested in your public comments or opinions on any aspect of the company’s operations, including proposed rates, service quality or any other issue of concern. If you are writing a letter or sending an e-mail to the Public Advisor’s Office regarding this proposed application, please refer to the application number. All comments will be circulated to the Commissioners, the assigned ALJ, and other line Divisions working on this GRC. Please send all e-mails or written correspondence regarding your comments and opinions to the address listed below:

The Public Advisor’s Office
California Public Utilities Commission
320 West Fourth Street, Suite 500
Los Angeles, CA 90013
E-mail: Public.Advisor.ca@cpuc.ca.gov

All written correspondence and e-mails are provided to the assigned Administrative Law Judge, Commissioners, and other appropriate CPUC staff. All public comments are also provided to the CPUC’s Formal Files Office as part of the formal public comment file for this proceeding.
