## **Executive Summary**

In 2005, SCE continued to provide comprehensive services to eligible low income customers by installing all feasible energy saving measures for each qualified home. As a result, SCE's Low **Income Energy** Efficiency (LIEE) program continues to provide its participating customers with utility bill savings and additional benefits such as improvements to comfort, health, and safety.

SCE's 2005 program included standard LIEE measures (such as refrigerator replacement, relamping, and evaporative cooler installation), plus new measures adopted by the Commission as part of the Rapid Deployment effort (D.01-05-033) and retained in D.03-11-020 (such as airconditioner replacement). SCE in 2005 continued to ensure that treated

households are assessed upfront to establish eligibility for all available measures under the LIEE program.

In October, 2005, the Commission addressed the potential impacts of anticipated higher natural gas bills on low-income customers during the 2005/2006 winter, resulting from higher gas costs faced by utilities. The Commission explored a full range of actions the utilities, regulators and individual consumers could undertake to reduce the impact of higher costs on California's low income customers.

As a result, the Commission issued Decision 05-10-044, which expanded and accelerated LIEE offerings and activities in ways such as the following:

 SCE received authorization to increase the

- number of new refrigerators and compact fluorescent lights (CFLs) placed in qualifying homes.
- The upper income eligibility thresholds for the LIEE and California Alternative Rates for Energy (CARE) programs are increased from 175% to 200% of federal poverty guidelines for all customers.

Among program highlights in 2005, SCE's LIEE program:

- installed 2,571 evaporative coolers;
- weatherized approximately 1,000 homes;
- relamped homes with 146,862 CFLs and 187 outdoor hard-wired CFL fixtures;
- installed 19,905 refrigerators to replace older inefficient models and;
- energy education services were

provided to 67,713 homes through SCE's LIEE and SoCalGas' Direct Assistance (DAP) programs.

## **Program Description**

SCE's LIEE program provides energy efficiency assistance at no cost to qualified low income customers whose household income meets guidelines established by the Commission. Effective with Decision 05-10-044 the income-eligibility requirements for SCE's LIEE program now match those for the California Alternative Rates for Energy (CARE) program, both of which are set at 200% of federal poverty guidelines.

SCE strived in 2005 to deliver the LIEE program efficiently, achieve the Commission's mandate that customers receive all measures for which they are eligible, and take advantage of opportunities to leverage program resources to maximize the number of customers

receiving program services.

In 2005, SCE contained costs and maximized program funding by entering into competitively bid purchase orders to buy energy-efficient refrigerators and CFLs in bulk. SCE's successful vendor was required to maintain adequate inventory levels to respond to SCE contractor requests.

Assessment for all electric measures and income verification were conducted on the first initial visit to customer homes. SCE continued to train all service providers on the procedures for assessing homes.

Throughout 2005, SCE maintained a commitment to participate in and seek out joint leveraging opportunities with Low Income Home **Energy Assistance** Programs (LIHEAP) providers. For example, SCE entered into agreements with LIHEAP providers for the installation of refrigerators in SCE's service territory. These agreements enabled SCE to deliver energyefficient refrigerators to LIHEAP providers, with installation costs being paid through LIHEAP funds

## EVAPORATIVE COOLERS INSTALLATION

SCE helps qualified low income customers control their summer space cooling costs by offering an evaporative cooler to use in place of their refrigerated air conditioners. SCE's contractors target customers in hot, dry climates where coolers are most effective.

#### WEATHERIZATION

SCE provides weatherization services to customers with electric-space heating. Services include, but are not limited to: attic insulation, weather-stripping/caulking, low-flow shower heads, electric water heater blankets, and building envelope repair.

#### RELAMPING

SCE's contractors provide CFLs to help low income customers conserve energy and control their lighting costs by offering free CFLs to replace incandescent bulbs. Each CFL provides the same amount of light as an incandescent, but at a lower wattage. A household may receive as many as five CFLs, to replace 60- to 100-watt incandescent equivalents. In addition, participants receive Energy Education packets which serve to

reinforce the energy efficiency message.

#### ENERGY EDUCATION

Low income customers that receive energy saving LIEE measures also receive an Energy Education Resource Guide (English/Spanish) that contains information about SCE's programs, energy saving tips, appliance safety tips, and information on community, state, utility and federal programs that service the low income community. Representatives from Community-Based Organizations (CBOs) and private contractors discuss energy efficiency while at customers' homes. Energy efficiency tips on electric appliances are also offered to customers serviced through the SoCalGas DAP program.

## REFRIGERATOR REPLACEMENT/ RECYCLING

SCE's contractors replace non energyefficient refrigerators with energy-efficient models. In order for a landlord-owned unit to qualify for replacement, the landlord must own the refrigerator and the tenant pays the electric bill or if the landlord owns the refrigerator and the tenant does not pay the electric bill, the landlord must make a co-payment of \$175.00. In addition, there are other requirements such as: the unit must be ten years old or older, plugged into a legally grounded three-prong outlet, and the customer must allow SCE to recycle the old refrigerator.

#### PORCH LIGHT REPLACEMENT

Qualified customers receive one free hardwired CFL porchlight fixture to replace an existing incandescent light based porch light fixture.

WINDOW/WALL AIR CONDITIONERS SCE helps low-income customers control summer energy costs by offering new, energy-efficient window/wall air-conditioners.

Installations are targeted to customers who reside in eligible climate zones where temperatures regularly exceed 100 degrees.

## 2005 Results and Achievements

## EVAPORATIVE COOLER INSTALLATION

In 2005, 2,571 evaporative coolers were installed. These installations resulted in an annualized energy savings of 781 MWh.

#### WEATHERIZATION

In 2005, approximately 1,000 electrically-heated homes were weatherized resulting in net annualized savings of 132 MWh. Homes were weatherized through SCE's Inter-Utility Cooperative with SoCalGas, and by a private contractor working in areas not jointly serviced by SoCalGas and SCE.

#### RELAMPING

SCE installed 146,862 CFLs in customers' homes during 2005. These installations resulted in a net annualized energy savings of 3,415 MWh.

## ENERGY EDUCATION

SCE's contractors provided Energy Education to 67,713 customers through inhouse counseling and Energy Education packets designed to help them lower energy use through simple conservation practices.

## REFRIGERATOR REPLACEMENT/ RECYCLING

In 2005, 19,905 energy efficient refrigerators were installed and 19,905 inefficient refrigerators were recycled through SCE's LIEE program. The annualized energy savings of replacing these refrigerators was 14,851 MWh.

### PORCH LIGHT REPLACEMENT

In 2005, SCE installed 187 outdoor light fixtures. These installations resulted in an annualized energy savings of 8 MWh.

## WINDOW/WALL AIR CONDITIONERS

In 2005, SCE replaced 201 window/wall air conditioners. These installations resulted in an annualized energy savings of 52 MWh.

## Measurement, Evaluation, & Regulatory Oversight

Measurement & Evaluation (M&E) funds and personnel are used to support the development and implementation of studies of the low income population and programs. Studies include load impact evaluations that estimate the energy savings achieved by the utilities' low income energy efficiency programs, process evaluations that assess opportunities for improvement in program design and delivery, and similar studies as required by the Commission or determined by the utilities to be necessary to develop and implement effective programs.

## 2005 RESULTS AND ACHIEVEMENTS

With the assistance and oversight of an administrative group consisting of utility

M&E staff, Energy Division, and Division of Ratepayer Advocates (DRA) staff representatives, SCE M&E staff managed the completion of a comprehensive evaluation of the 2002 statewide impact evaluation of the LIEE program. The group provided comments on the draft report, presented the revised draft at public workshops, and approved the final report in June, after which it was posted on the CALMAC website.

Based on lessons learned and recommendations from the 2002 study, the study consultants and the study administrative group requested that more detailed program tracking data be collected during 2005 to provide a stronger basis for the next evaluation. The

consultants monitored the program data collected during 2005, gathered some data from the field, and developed a detailed research plan for evaluating the 2005 program.

In 2005, the SCE M&E group provided support on a number of ongoing matters including completion of the PY2004 Annual Bill Savings Report, which estimates customer bill savings for the 2002 -2004 program.

Development of this report was managed by Pacific Gas & Electric Company.

#### **2006 PLANS**

During 2006, the detailed research plan for the 2005 program evaluation will be presented in public workshops, revised as necessary, and approved. The consultants will

gather and review 2005 program tracking data and 2004 through September 2006 monthly energy consumption data from the utilities and will then begin the energy savings analyses. The study is scheduled for completion during the first half of 2007.

In addition, the M&E group will provide support on a number of ongoing matters including completion of the next Annual Bill Savings Report, development of

estimates of LIEEeligible customers by two-level zip code (zip +2) for use by program managers and contractors, and ad hoc measurement and analysis support as requested.

### REGULATORY OVERSIGHT

Regulatory oversight consists of activities that are undertaken to meet regulatory requirements for reporting program activities. Areas of support included developing responses to data requests,

providing comments on workshop proposals and draft decisions, preparation of filings, and monthly reporting of program results. Other activities related to compliance with Commission rulings related to LIEE standardization, High Winter Gas Bills, bill savings reporting, developing information for the Low Income Oversight Board, and development of the Low Income Energy Efficiency Annual Report.

## **Energy-Related Hardship**

The Reporting Requirements Manual Working Group (RRMWG) previously developed a working definition of the term "energy-related hardship" as it relates to comfort level, employment, safety and security. The definition agreed upon by the RRMWG states that "energyrelated hardship" are "adverse impacts on the comfort, health, and safety of low income customers that can be mitigated by access to low income energy efficiency programs and services."

SCE's LIEE program assists in lessening the energy-related hardships experienced by some low income customers. Evaporative coolers, window/wall air conditioner replacements, and weatherization measures increase comfort and help

customers ease energy-related stress from inadequate control over ambient climate and temperature due to insufficient energy efficiency measures. The program provides additional protection from outside elements. Without the program, customers would have less relief from energy-related stress resulting from ambient climate or temperature especially in extreme temperature regions.

SCE's contractors provide evaporative coolers in the desert regions of SCE's service territory. Without evaporative coolers, these customers would be subject to the extreme desert heat unless they operated their air conditioners at much higher cost. The **Evaporative Cooler** program enhances the physical health of customers by

protecting them from excessive heat if they could not afford to run their air conditioners. Replacing inefficient or inoperable window/wall air conditioners also helps address energy related hardship. In addition to increasing comfort, weatherization measures, such as the repair of doors and windows, enhances the customers' physical and mental well-being by reducing exposure to outdoor elements. Repairing doors and windows also increases the customers' sense of home security and safety. SCE's Porch Light program also enhances home security.

## Access to Programs Provided By Community-Based Providers

SCE maintains an ongoing relationship with DCSD's Home **Energy Assistance** Program (HEAP) by providing data for DCSD's California LIHEAP Leveraging application. An agreement signed by both parties details the responsibilities of both entities in establishing the coordination of services to SCE's customers.

This agreement places DCSD within compliance of the Department of Health and Human Services' LIHEAP Leveraging **Incentive Program** requirements and enables the State of California to claim the CARE discount as a leverage resource. As part of the agreement, both DCSD and SCE agree to the referral of their customers to the other's energy assistance program through written

and/or verbal advertising of the programs. The agreement allows SCE to publish the telephone numbers of DCSD programs on SCE program applications and literature, and allows DCSD to include SCE program information on various DCSD literature pieces.

As part of the delivery of SCE's LIEE program and other programs they offer, CBOs attempt to identify customer needs that might be met by other CBO programs. Qualifying customers are referred to these programs. Not all CBOs offer all services to customers. SCE currently contracts with CBOs and private contractors for the delivery of the LIEE program. SCE's CBOs offer a variety of low income services in addition to their LIEE

service delivery. Examples of such services include senior nutrition and transportation, job training, and health care.

## **Bill Savings**

SCE, PG&E, SDG&E, and SoCalGas have coordinated to produce the Bill Savings estimates that are included in Tables TA 7, TA 8, and TA 9 of this report.

Tables TA 7 and TA 9, use impact estimates from the Impact Evaluation of the 2001 Statewide LIEE Program that was completed in April 2003.

The Bill Savings Report, including any updates to the variables and calculations used in preparing the applicable standard tables in the Technical Appendix for this program area, is being filed separately as a stand-alone document by May 1, 2006, and will include a discussion of variations across utilities.

## **Shareholder Performance Incentives**

The Commission approved the 2001 LIEE shareholder incentive mechanism in Decision 01-06-082 and directed that it remain in place until further order of the Commission.

treatment, SCE did not achieve the minimum performance standard in 2005, and thus is not submitting a 2005 earnings claim.

The 2001 mechanism was based upon the attainment of a minimum performance standard for the LIEE "Big Six" measures. Upon meeting the performance standard, the earnings mechanism calls for program administrators to earn a 2% management fee on all LIEE program expenditures in 2001. Due to the limited opportunities for weatherization measures in SCE's service area, and the need to assure that SoCalGas' 2005 weatherization customers received the corresponding electric appliance measures to ensure comprehensive

## **Technical Appendix**

This section contains narrative that documents and explains the data shown for Tables TA 1 through TA 9.

## Table TA 1 Program Cost Estimates Used for Cost-Effectiveness - Low-Income Energy Efficiency

This table documents those costs used in determining the cost-effectiveness of the low-income energy efficiency programs. These tables provide all program costs, including costs expended in 2005.

#### **Program Incentives (Recorded)**

These costs represent incentives paid to contractors, including installation and measure costs during 2005 (Actual).

#### **Program Administrative Costs (Recorded)**

These costs include expenditures directly charged for SCE and contract labor associated with program administrative costs.

#### **Shareholder Incentives**

Costs represented in the Shareholder Incentives column are those relating to the performance awards earned during 2005 from the 2005 low-income energy efficiency program.

#### **Other Costs**

Costs for non-incentive and non-administrative activities include energy education, printing of materials, regulatory, legal, indirect costs, CPUC Energy Division staffing, and Cool Centers.

#### **Total Utility Costs**

Costs represented in the Total Utility Costs column represent the sum of the Program Incentives (Actual and Committed) columns, Program Administrative Costs column, Shareholder Incentives, and Other Costs.

#### **Incremental Measure Costs (Net)**

These costs generally represent the incremental costs of energy efficiency measures over the standard replacement measures. The gross amounts of these costs are reduced by appropriate net-to-gross ratios for the particular measure or end-use. These ratios are 1.0 for all Low-income Energy Efficiency program measures. SCE's incremental measure costs for the Low-income Energy Efficiency program equal the total installation and measure costs for installed measures. Thus, for all LIEE program measures, incremental measure costs are equal to the incentive costs.

## Table TA 2 Program Cost Elements - Low-income Energy Efficiency

This table documents the breakdown of costs of the low-income energy efficiency program. The table provides detail of program costs expended in 2005.

#### **Labor Costs**

Any internal direct (administrative and/or implementation) costs (indirect costs are a separate line item), burdened by overhead, that represents person hours.

#### **Non-Labor Costs**

All direct internal (administrative and/or implementation) costs (indirect costs are given as a separate line item) not covered under labor, such as printing of materials.

#### **Contract Labor Costs**

All outsourced costs (administrative and/or implementation). Contract costs do not need to be further broken out by labor/non-labor. This category includes agency employees and outsourced inspection contractors.

#### **Total Costs**

The Total Costs are the sum of the aforementioned utility costs - Labor, Non-labor, and Contract costs.

## Table TA 3 Program Detail by Housing Type and Heating Source - Low-income Energy Efficiency

The table provides, by housing type and heating source, the MWh savings for program year 2005, direct program costs, and the number of dwellings served.

Also, an estimate of the total dwellings that will receive program services in 2006 is provided.

## Table TA 4 Program Detail by Measure - Low-income Energy Efficiency

The table provides, by measure grouping, the MWh savings for program year 2005, direct program costs, and the number of dwellings served. Also, for specific measures within the measure groupings, the number of dwellings receiving service is provided.

# Table TA 5 Installation Costs of LIEE Program Installation Contractors - Low-income Energy Efficiency

The table provides, by measure grouping, the units installed, dwelling served and costs by contractor type (either CBO or WMDVBE, or private, i.e., neither CBO nor WMDVBE).

# Table TA 6 Percentage of Dwellings Served By Contractor Classification (Last Year) - Low-income Energy Efficiency

The table provides by measure, the percentage of dwellings completed by each contractor (CBO or Non-CBO) and indicates whether each contractor is WMDVBE certified.

## Table TA 7 Lifecycle Bill Savings - Last Year - SCE - Lowincome Energy Efficiency

The table indicates by measure, the number of measures installed, per measure electric kWh savings, gas therm savings, effective useful life, and Total Measure Lifecycle Bill Savings in dollars. The last two rows indicate the number of homes served by the program in 2005; and the life cycle bill savings in dollars per home.

# Table TA 8 Energy Rates Used for Bill Savings Calculations - SCE - Low-income Energy Efficiency

The table lists the energy rates used for bill savings calculations stated as \$/kWh for years from 2005 through 2029.

## Table TA 9 Bill Savings - SCE - Low-income Energy Efficiency

The table lists for the 2003, 2004, and 2005 program years the program costs, program life cycle bill savings in dollars, bill savings over cost ratio, and per home average life cycle bill savings
