

CRITICAL PEAK PRICING (CPP) FOR BUSINESSES

A brief guide with facts, tips, and helpful answers.

GET TO KNOW CRITICAL PEAK PRICING (CPP)

CPP is an optional rate that offers a discount on summer electricity rates in exchange for higher prices during 12 CPP event days per year, usually occurring on the hottest summer days. By reducing your electricity use during CPP events, you can lower your electric costs during the summer season — when your bills are typically the highest.

NEW TIME-OF-USE (TOU) PERIODS

The summer season begins on June 1 and continues until September 30. CPP events occur on weekdays; weekends and holidays are excluded.

HERE'S HOW CPP WORKS

- 12 CPP events are called every year between 4 p.m. and 9 p.m. CPP events can be called year-round on non-holiday weekdays.
- Bill credits are applied to reduce your power costs during the summer months (June 1 – September 30).
- Energy used during a CPP event is charged at a higher rate for the duration of the event.
- CPP event notifications are sent to you a day-ahead of the event so you can plan your usage. Go to sce.com/CPUpdatecontact to update or register your contact preferences for alerts.

TRY CPP RISK FREE

To see if CPP is a good fit for your business, we're providing one full year of Bill Protection. With Bill Protection, we guarantee if you pay more during your first year on CPP, we'll credit you the difference. You can choose to unenroll from CPP at any time. Keep in mind if you unenroll from CPP, you will not be able to make another change to your account for at least one year.

To switch to a different rate or for more information, please contact your SCE Account Manager, call **1-800-798-3723**, or visit sce.com/ CPP.

TIPS FOR REDUCING ENERGY USE ON CPP EVENT DAYS

Here are some good energy-reducing practices to use during CPP events:

- Turn off all nonessential indoor/outdoor lighting, signage, window displays, fountains, and office equipment not in use
- Raise cooling thermostat settings to 78°F with a programmable smart thermostat
- Install sensory controllers on vending machines or shut them down for short periods of time
- Reduce production during CPP events or shift production to Off-Peak or Super Off-Peak hours (when CPP events will not occur)
- Unplug battery chargers and use only pre-charged equipment during On-Peak hours; charge battery operated equipment prior to CPP events
- Turn off ice machines during CPP events between 4 p.m. and 9 p.m.

A CPP SUCCESS STORY

“We lowered our electric bill by enrolling in Critical Peak Pricing and reducing our energy usage during CPP event hours. We received \$11,300 in incentives in 2014 and nearly \$15,000 in 2015.”

— Paola Bravo, President and Co-owner,
S. Bravo Systems

For more customized tips specific to your type of business, visit [sce.com/energytips](https://www.sce.com/energytips).

Warehouses

- Pre-charge all electric vehicles and battery-operated equipment before or after CPP event hours

Manufacturing and Food Processing

- Turn off motors, vertical lifts, conveyor belts, and nonessential process equipment
- Adjust schedules so energy-intensive production happens before and after CPP event hours
- Schedule batch or continuous processes before or after CPP event hours

Buildings

- Shut down unused rooms and facilities
- Install daylighting controls that let you adjust lighting levels

Retail

- Turn off unused back-office equipment
- Turn off electric signage and displays
- Power down unused checkout stations
- Turn off excess cash registers and computers

YOU HAVE QUESTIONS. WE HAVE ANSWERS.

Frequently asked questions about CPP.

Is CPP right for my business?

If your business is able to reduce energy during CPP events, you may benefit from CPP. Use our Rate Plan Comparison Tool at [sce.com/ratetool](https://www.sce.com/ratetool) to compare your current rate costs with other rates to see if CPP is best for your business. Please note, some rates are not available in the Rate Plan Comparison Tool.

How many events can be called and when?

CPP events can be called year-round, 12 times every calendar year on non-holiday weekdays between 4 p.m. and 9 p.m. However, CPP events usually occur during the summer season on the hottest summer days.

What triggers a CPP event?

CPP events are usually called when electricity demand peaks due to extreme or unusual temperature conditions. Other triggers can include higher energy prices, electrical emergency alerts issued by the California Independent System Operator (CAISO), or an SCE system emergency that affects local grid operations. On these days, the costs of energy will increase during On-Peak demand times between 4 p.m. and 9 p.m.

Am I required to shut off power during a CPP event?

No. You are not required to completely shut off power during a CPP event. However, all electric usage during an event will be charged at a rate significantly higher than normal.

Can a CPP event be canceled after it is called?

No. Once an event is called it cannot be canceled.

How will I be notified if a CPP event is scheduled?

If you have signed up to receive notifications from SCE, we will notify you of a CPP event one day in advance. You can choose to receive an automated message from one of the following courtesy communications: phone, text, or email. You are responsible for keeping your contact preferences up to date with any changes.

How do I request courtesy CPP event notifications?

Visit [sce.com/CPUpdatecontact](https://www.sce.com/CPUpdatecontact) to set up or update your contact preferences.

How can I confirm a CPP event is being called?

To check the status of active and historical events, visit the Demand Response event Status at [sce.com/drpevents](https://www.sce.com/drpevents) or download the SCE DR Alerts mobile app.

Am I still responsible for the higher CPP energy charges during an event if I do not receive a notification?

Yes. Failure to receive a courtesy alert does not exempt you from reducing your energy use during an event, and you will be subject to paying higher charges for the duration of the event. You are responsible for setting up and keeping your contact preferences up to date.

Why does CPP only pay bill credits during the summer, even though an event may be called year-round?

The ability to call CPP events throughout the year gives us more flexibility to call upon needed resources. Credits are only applied from June 1 to September 30 to help offset the typically higher energy costs during summer months.

Is my business eligible?

Most business customers receiving bundled service (delivery and generation of electricity) from SCE are eligible for CPP. If you're a bundled business customer, your rate may already be enrolled on CPP.

How much energy are we using?

You may view your facility's energy use with our online tool, My Account. Visit [sce.com/myaccount](https://www.sce.com/myaccount) to register.

Can I find out what SCE's daily system peak was or find out what the peak demand forecast is for the next day?

SCE's system load information is available on the OASIS page on the CAISO website, where you can view hourly system load and forecasts for each utility's system within the CAISO control area.

To learn more about CPP or to set up notification preferences, call **1-800-798-3723**, or visit [sce.com/ CPP](https://www.sce.com/ CPP).
