Our Commitment to California

Keeping our communities safe from wildfires

Acton and Agua Dulce
May 19, 2020

#PoweringThruTogether
SCE Presenters

Liz Seelman
Government Relations Manager
Local Public Affairs

Phil Herrington
Senior Vice President
Transmission & Distribution

Marc Ulrich
Vice President
Customer Service Operations
AGENDA

• Wildfire Preparedness Tips
• SCE’s Response to COVID-19
• 2019 Lessons Learned / What’s New for 2020
• SCE’s Wildfire Mitigation Plan
  • Mitigation Activities in Acton and Agua Dulce
• Public Safety Power Shutoffs (PSPS) Outages
• Customer Care Programs and Community Engagement
  • Customer Care Programs for Acton and Agua Dulce
• Resources
• Q&A
WILDFIRE PREPAREDNESS TIPS

GET READY, GET SET, GO!
Wildfire Is Coming. Are You Ready?

GET PREPARED FOR WILDFIRE BEFORE IT STRIKES BY FOLLOWING THE BE PREPARED TO GO. SET GO! GUIDE:

BEING READY
- 100 FT
- CREATE DEFENSIBLE SPACE. 100-FOOT DISTANCE BETWEEN YOUR HOME AND CONTIGUOUS WILDLANDS IS REQUIRED. LEARN HOW TO MAINTAIN THE TWO ZONES OF DEFENSIBLE SPACE NEEDED.
- UP TO 1 MILE
- HARDEN YOUR HOME. FLYING EMBERS CAN DESTROY HOMES UP TO A MILE FROM WILDLAND AREAS. LEARN HOW TO PROTECT AND HARDEN YOUR HOME FROM A WILDFIRE THREAT.

GETTING SET
- 1. WHAT
- 2. HOW
- 3. WHO
- 4. WHEN
- PREPARE YOUR HOME AND FAMILY FOR THE POSSIBILITY OF HAVING TO EVACUATE.
- CREATE A WILDFIRE ACTION PLAN.
- ASSEMBLE AN EMERGENCY SUPPLY KIT.
- FILL OUT A FAMILY COMMUNICATION PLAN.

PRE-EVACUATION STEPS: PREPARE BOTH THE INSIDE AND OUTSIDE OF YOUR HOUSE FOR EVACUATION. GET THE CHECKLISTS.

ENSURE YOUR EMERGENCY SUPPLY KIT IS IN YOUR VEHICLE.

COVER-UP TO PROTECT AGAINST HEAT AND FLYING EMBERS. WEAR LONG PANTS, LONG SLEEVE SHIRT, HEAVY SHOES/BOOTS, CAP, DRY BANDANNA TO COVER FACE, GOGGLES OR GLASSES. 100% COTTON IS PREFERABLE.

LOCATE YOUR PETS AND TAKE THEM WITH YOU.

REVIEW YOUR EVACUATION PLAN CHECKLIST.

BEING READY TO GO

GO!

EVIACATION STEPS: WHEN IMMEDIATE EVACUATION IS NECESSARY. GET READY TO GO.

#READYFORWILDFIRE
OUR RESPONSE TO THE COVID-19 OUTBREAK

• Continuing to deliver safe and reliable service to our communities

• Safety of our workforce, our customers and the public remain our top priority

• Prioritizing critical work necessary to protect our communities and public safety

• Enhancing programs to ensure customers continue receiving benefits (Medical Baseline and CARE), suspending service disconnections for nonpayment, and waiving late fees

Supporting the communities we serve by donating more than $1 million to local nonprofits responding to the pandemic. (Edison International’s charitable causes are funded entirely by shareholders and not customers.)

• For more information, visit sce.com/safety/coronavirus
WHAT WE LEARNED / WHAT’S NEW FOR 2020

• **Wildfire Mitigation Tools**
  • Implementing grid hardening activities and hi-tech tools and technologies
  • Improving our ability to sectionalize to reduce the number of people impacted

• **Customer Care Programs and Communications**
  • Actively pursuing new programs to help customers
  • Improving website and communications capabilities to provide additional, timely information and notifications

• **Stakeholder Engagement**
  • Enhancing communication and collaboration with stakeholders and partners
  • Partnering with community-based organizations to better assist vulnerable customers
WILDFIRE MITIGATION PLAN
MITIGATION STRATEGY BASED ON FIRE SCIENCE

Eliminating any side of the fire triangle can prevent ignitions

Weather Conditions (Wind, Humidity)

Energy from Electrical Infrastructure

Vegetation & Structures
Our Wildfire Mitigation Plan

- **Wildfire Cameras**
  - 161 cameras installed thoroughly covering high fire risk areas

- **Insulated Wires**
  - 650+ miles installed
  - 1200+ miles by the end of 2020

- **Weather Stations**
  - 850+ installed by the end of 2020

- **Incident Management Team**
  - 500+ qualified response team members, who are on call for duty 24/7

- **Enhanced Inspections**
  - Continue advancing inspections to address wildfire risks in 2020

- **Protective Devices**
  - 12,000+ fuses and remote controlled sectionalizing devices applied to interrupt electrical current more quickly & boost reliability by segmenting circuits to isolate problems
HIGH FIRE RISK AREAS IN ACTON AND AGUA DULCE
Weather stations in Acton/Agua Dulce

12 Weather stations installed

18 Installed by the end of 2020
Insulated Wires in Acton/Agua Dulce

80 MILES INSTALLED

199 MILES PLANNED FOR INSTALLATION BY THE END OF 2021 WHICH REPRESENTS 100% OF THE WORK IN THE AREA *

Installation of covered conductor (insulated power lines) reduces the risk of a wildfire starting and improves reliability and reduces the potential for Public Safety Power Shutoffs.

* Assuming CPUC approval of total 2021 GRC scope and funding and other factors.
ADDITIONAL OPERATIONAL FLEXIBILITY IN ACTON AND AGUA DULCE

• SCE developed plans to sectionalize the five circuits in the area to reduce the number of customers de-energized.

• By adding additional weather stations and further dividing our grid into sections, we can reduce the number of customers de-energized (depending on weather and other conditions).
WHAT DOES THIS MEAN FOR ACTON AND AGUA DULCE?

• If the weather conditions were to be the same as last year in the Acton and Agua Dulce area, we would expect to see a 15-30% reduction in the number of customers de-energized due to SCE's circuit improvements
• As more grid hardening including covered conductor is installed, these improvements will continue to increase
• Wind is not the only factor in making the decision to de-energize
  • Environmental influences such as dry vegetation and circuit conditions still factor into this decision and can modify the de-energization wind speeds
• We have also ramped up customer care programs to reduce the impacts of potential Public Safety Power Shutoffs
Vegetation Management

- Hazard tree removal (beyond traditional trim zone)
- More than 20 in-house certified arborists
- More than 650 vegetation management crews, totaling nearly 1,500 workers
- 1.1 million trees inspected annually; 500,000+ trees in high fire risk areas
- 750,000 pruned per year
- Vegetation removal at poles
- LiDAR surveying
Public Safety Power Shutoff

- De-energizing power lines to prevent ignitions
- Used during elevated fire conditions
- Primarily impacts circuits in high fire risk areas
- Use of multiple methods to notify people in affected areas before, during and after a de-energization event
PSPS DECISION POINTS

Decision points include, but are not limited to:

- NWS Red Flag Warnings
- SCE meteorologists forecast strong wind conditions in service area
- SCE fire scientist assessment of fire potential to include consideration of weather and fuels
- Real-time observations from qualified electrical workers monitoring for hazardous conditions in the field
- Impact of de-energizing circuits on first responders and essential services
## PSPS Ideal Timeline

<table>
<thead>
<tr>
<th>Time Frame</th>
<th>Event Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>4-7 Days Ahead</td>
<td>SCE begins planning for potential PSPS</td>
</tr>
<tr>
<td>3 Days Ahead</td>
<td>SCE Incident Management Team activated</td>
</tr>
<tr>
<td>2 Days Ahead</td>
<td>Updates to notifications</td>
</tr>
<tr>
<td>1 Day Ahead</td>
<td>Update notification sent</td>
</tr>
<tr>
<td>1-4 Hours Before</td>
<td>Imminent Shutdown notification</td>
</tr>
</tbody>
</table>

### Planning and Monitoring

SCE will target the schedule above to notify customers. Sudden onset of hazardous conditions that jeopardize public safety may impact SCE’s ability to provide advanced notice to customers. Notifications can be provided via email, text, voice call, and TTY formats; zip code-level alerts; and NextDoor.

### Outage

<table>
<thead>

<tr>
<td>POWER RESTORATION</td>
</tr>
</tbody>
</table>

Notification Before Re-Energization Occurs
Notification Power Restored After Inspection
CUSTOMER CARE & ENGAGEMENT
ENHANCEMENTS TO COMMUNICATIONS

Website Improvements
• Dedicated PSPS page
• Fire Weather and PSPS information
• Increased capacity to handle website visits
• Improved maps
  • Look up PSPS events and status by address
  • Maps showing locations of Community Resource Centers and Community Crew Vehicles
  • Providing estimated restoration times

Notifications
• Zip code PSPS notifications
• Expanded use of social media (e.g. Nextdoor)
• Imminent notifications when possible
CUSTOMER CARE PROGRAMS

Local Community Resources

• Community Crew Vehicles and Community Resource Centers
  • May include water, ice, blankets, solar powered USB chargers, onsite phone charging, outage information, other resources

Rebates & Programs

• Self-Generation Incentive Program (SGIP)
  • Rebates for whole home energy storage
  • May 28th CPUC Webinar (selfgenca.com)
• $50 rebate for small appliance & device battery backup
• Fully subsidized Critical Care customer battery back-up (income qualified)
CUSTOMER CARE PROGRAMS FOR ACTON & AGUA DULCE

• Community Crew Vehicles (CCVs) and Community Resource Centers (CRCs)
  • CRCs at Acton Community Center and the Agua Dulce Women’s Club
  • Additional CRC locations in Palmdale and Santa Clarita
  • May include water (including bulk potable water), ice, blankets, solar powered USB chargers, onsite phone charging, outage information, other resources
  • Locations will be provided through our website, social media, and local governments when the facilities are open

• Rebates and Programs
  • $300-$500 generator rebate for well water dependent customers
  • Working with community leaders to identify locations for Resiliency Zones
TALKING WITH OUR COMMUNITIES

• On-going community meetings held in high fire risk areas
• Meetings with cities, counties and tribal governments
• Outreach to essential service providers
• Advertising campaign in market educating customers about preparing for power shutoffs
• Letters communicating potential power shutoffs planned for all customers in service territory
REACHING VULNERABLE COMMUNITIES

• Engaging with our most vulnerable customers
• Partnering with community-based organizations and community stakeholders such as Independent Living Centers and 211 organizations
• Supporting resiliency, working with existing philanthropic partners and deploying customer programs for PSPS preparedness, all-hazard awareness and emergency planning
• Encouraging customers to sign up for medical baseline and critical care programs
INVESTING IN OUR COMMUNITIES

• Keeping our communities safer through wildfire mitigation and preparedness
  o First responder safety
  o Community readiness
  o Resiliency and disaster recovery
• Provide us your feedback through the email survey or our website

• Presentation and meeting recording available

• PSPS alerts

• SCE’s Medical Baseline program

• SCE programs and rebates

• Be prepared with a safety preparedness plan, some basic supplies and advance planning

• Power outage tips

**Power Outage Safety Tips**

- If you see a downed power line, do not touch it or anything in contact with it. Call 911 immediately.
- Power outages in the area may impact traffic signals so motorists should use extreme caution and treat all intersections as four-way-stops.
- Remember to check emergency supplies to be sure you have a battery-operated radio, a flashlight and fresh batteries.
- Use flashlights instead of candles to avoid fire hazards in your home or business.
- Consider using LED light bulbs with a battery backup, which can stay on during outages.
- If you’re in a vehicle with a fallen power line on it, stay in the vehicle and remain calm until help arrives. It is OK to use your cellphone to call 911. If you must leave the vehicle, remember to exit away from downed power lines and exit by jumping from the vehicle and landing with both feet together. You must not touch the vehicle and the ground at the same time. Then proceed away from the vehicle by shuffling and not picking up your feet until you are several yards away. 
- If you use a generator, place it outdoors and plug individual appliances directly into it, using a heavy-duty extension cord. Connecting generators directly to household circuits creates “backfeed,” which is dangerous to repair crews. Please consult the manufacturer’s manual for operating the generator.
- If someone in your home is dependent on electric-powered, life-sustaining medical equipment, have an emergency plan that includes a back-up power source, or make arrangements to relocate.
- Do not use outdoor cooking equipment to cook indoors. Such equipment can release carbon monoxide and other toxic gases.
- Use stairs instead of an elevator. Elevators are powered by electricity and may stop functioning during an outage. Be safe by taking the stairs and use a flashlight when necessary.
- For more information, visit [sce.com/outagetips](http://sce.com/outagetips)
HOME GENERATOR TIPS

Using a backup source of power can keep you up and running during an outage, but generators can be dangerous if connected or used improperly. Consult an electrician before you bring a generator home to determine the proper equipment and set you up safely.

1. Equipment Options: Choose a generator for more power than you think you will need, depending on what lighting, appliances, and equipment you plan to connect to the generator. Again, this is best determined by an electrician.

2. Safety Hazards: Every year people die in portable generator-related incidents. The primary hazards to avoid when using a generator are carbon monoxide (CO) poisoning, electric shock, electrocution and fire. Follow the directions supplied with the generator.

3. Getting Hooked up: Connect electrical equipment to a portable generator using a heavy duty, outdoor extension cord that is rated more than the sum of the connected appliance loads. Make sure the entire cord has no cuts or tears and that the plug has all three prongs, especially a grounding pin. Do not run portable generators indoors, and don’t connect a portable generator to your home’s electrical wiring or electrical panel as this can lead to serious injury or electrocution.

4. Beware of Backfeeding: Never try to power the house wiring by plugging a generator into a wall outlet, otherwise known as “backfeeding”. This is extremely dangerous and can electrocute utility workers and even neighbors. Electrocution is the fifth leading cause of all reported occupational deaths.

5. Connect with an Electrician: If you decide to wire a generator directly to your home, California state law mandates that you notify Southern California Edison. The only recommended method to connect a generator to house wiring is by having a qualified electrician install a power transfer switch, in compliance with national, state and local electrical codes. Find a licensed electrician to see if you can install the appropriate equipment.

6. Portable vs. Permanent: Even a properly connected portable generator can become overloaded, become overheated and stress the generator components, which can lead to generator failure. For power outages, permanently installed, stationary generators are better suited for providing backup power to a home or business.

For more information, see the Understanding Backup Generation fact sheet.
