

The Smartest Way to Get a \$125 Sign-Up Bonus

Why Enroll Your Wi-Fi Smart Thermostat?

With up to \$125 in available bill credits, it has never been a better time to enroll your new or existing smart thermostat. If you are a joint customer of SCE and SoCalGas[®], you'll get a \$125 SCE bill credit when you successfully enroll through a qualified service provider. If you are our customer, but not a customer of SoCalGas, you'll receive a \$75 SCE bill credit.

A Wi-Fi smart thermostat may help reduce your electricity usage, and can potentially help you save on air conditioning (A/C) costs at home. Simply choose from a selection of qualified smart thermostats. Then, enroll in a qualified vendor's smart thermostat program that participates in our Save Power Days program. During Save Power Days events, your smart thermostat service provider may adjust the temperature and pre-cool your home – but you have the flexibility to adjust the temperature setting to help you stay comfortable. When you lower your A/C usage, you may be eligible for bill credits.

Getting Started

- Own or purchase a qualified smart Wi-Fi connected thermostat.
- Enroll your smart thermostat through the qualified smart thermostat service provider's website. Note that the smart thermostat service providers may refer to our Save Power Days program using a different name on their website.
- Your smart thermostat service provider will notify you of your eligibility for the program.
- When a Save Power Days event is called, your smart thermostat service provider may automatically adjust the thermostat temperature in your home.
- Once you are enrolled, you do not have to re-enroll the following year.
- If you want to leave the program, please contact your smart thermostat service provider.

How Does the Program Work?

- When a Save Power Days event is called, we will notify your smart thermostat service provider that an event will take place the following day (between 2 p.m. – 6 p.m.).
- Your smart thermostat service provider will notify you of the event, and may adjust your smart thermostat to pre-cool your home and/or change the temperature setting to reduce energy usage during the event.
- Additionally, your participation in a program can earn you up to \$60 in bill credits every year. You will earn \$1.25 in bill credits for every kilowatt-hour (kWh) saved during the event.

You can expect to see the bill credit on your next SCE statement.

- You always have the option to adjust your temperature setting at your discretion.
- Consider turning your temperature setting up a few more degrees, or turning your A/C off, for even greater savings.

Did you know?

One kWh of electricity is enough to watch TV for 10 hours, vacuum for an hour, or work on a computer for 5-10 hours.
